Re: Compliance Evaluation Inspection (CEI) Report
AUB – Oostanaula Creek WWTP
NPDES Permit Number TNR056424
McMinn County

Dear Ms. Davis:

On January 12, 2010, Mr. Scott Howell and Ms. Angela Young of my office performed a Compliance Evaluation Inspection (CEI) of the above referenced site. They met with Mr. Greg Hayes, and Mr. Craig Brymer onsite and were provided information during the inspection. The purpose of the inspection was to independently determine the facility's compliance with the terms and conditions of the NPDES Permit Number TNR056424.

Below is the CEI report. Please note that I have forwarded a copy of this report to EPA Region 4 in Atlanta.

Permit Verification: *Evaluation - Satisfactory*

Tennessee Multi-Sector General Permit (TMSP)-NPDES Permit Number TNR056424 Sector T became effective on March 15, 2003 with an expiration date of December 31, 2006. The permit authorizes the discharge of storm water associated with industrial activities to Oostanaula Creek. A copy of the NOI dated March 4, 2003, and the permit were maintained onsite.

Records and Reports - *Evaluation - Satisfactory*

The facility adequately maintains records as required by the permit. Records for monitoring reports, quarterly visual inspections, and training were all kept onsite for at least three years. Records are onsite and available for review as required.

Facility Site Review - *Evaluation - Satisfactory*

The facility is a wastewater treatment plant that serves a portion of Athens, TN. The site was originally constructed in 1960 and has recently been updated. It currently functions as an oxidation ditch treatment process. The facility is rated for 6.0 MGD average flow. The site is approximately 10 acres with the majority being impervious concrete, pavement or roofs. Stormwater from the facility is collected in storm drains located throughout the facility. It is piped into the plants effluent and discharges directly into Oostanaula Creek. Certain areas of the plant where stormwater contacts pollutants have storm drains that divert the water back into the plant.

Effluent / Receiving Waters - *Evaluation - Satisfactory*

There were no signs of pollutants leaving the facility at the outfalls or stormwater system.

Operation and Maintenance - *Evaluation - Satisfactory*

The facility has good housekeeping. The operation of the facility appears to be conducted in a manner to minimize pollutants leaving the site via stormwater.

Self-Monitoring Program - *Evaluation - Satisfactory*

The facility does conduct regular site inspections as required by the permit. Records of these are kept on site and were made available for review. The facility also provides training with regards to stormwater and those records are kept as well.

Storm Water - *Evaluation - Satisfactory*

There were no signs of pollutants in the storm water system. The facility has acceptable storm water management practices that are documented in the SWPPP. Spill cleanup is also addressed in the SPCC plan included in the SWPPP.

Pollution Prevention - *Evaluation - Satisfactory*

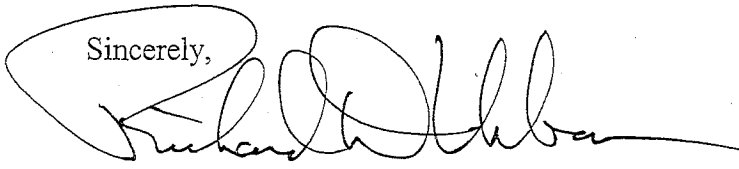

The facility has good pollution prevention measures outlined in their SWPPP and implemented onsite. Areas where stormwater contacts pollutants are constructed in a manner to contain the stormwater and divert it back into the plant to be treated.

Requested Actions

- Immediately fill out and mail in the enclosed NOI to obtain coverage under the current TMSP that became effective June 1, 2009
- Continue to implement good housekeeping practices to ensure that materials do not migrate offsite via stormwater.

The Division would like to thank you for your time and assistance during our inspection. If you have any questions concerning either our inspection or this report, please contact Mr. Howell at (423) 634-5711.

Sincerely,

Richard D. Urban, Ph.D.
Field Office Manager
Division of Water Pollution Control
